

Attn: Joint Filling Contractors

Ref: SealBoss® JointMaster Pro2 / SealBoss Quickfix Product Line

Dear Contractor:

SealBoss® Corp. would like to offer some pointers and advice when using the **SealBoss® JointMaster Pro2** and **SealBoss® Quickfix Product Line**. By following the basic application and maintenance steps to follow, your crew will have some of the necessary knowledge required for a successful joint filling application.

SealBoss® JointMaster Pro2:

Be sure to discard material through static mixer until a uniform mixture is achieved in order to eliminate any uncured sections (this must be done for each mixer replacement).

- Concrete in joints must be dry! Any moisture content at the time of application can and will cause joint protrusion as the moisture evaporates through the slab and joint.
- Replace mixers. The pump is not designed for pressure, rather simply to dispense the product at a 1:1 ratio (any obstruction or cured material in the hoses, pumps, or mixers can cause back pressure which can blow seals and throw the ratio off).
- Clean the manifold and pumps with using grease zerks provided. The applicators must replace the mixer after each break, and clean the entire pump every night.
- Shave the cured material. A slight overflow followed by shaving the excess is the best way to achieve a uniform, flush finish.
- Open tank valves during use. If the valves on the top of the pump are closed during operation, it could cause a suction effect which then distorts ratios.

SealBoss® QuickFix Application:

Below is some detailed information per the American Concrete Institute (ACI) for industrial floor joint filling.

Installation Depth:

ACI standards call for semi-rigid industrial floor joint fillers to be installed at full joint depth in saw-cut control joints or 2" minimum in joints deeper than 2" In joints deeper than 2", do not use foam backer rod as it may deflect under load, exposing joint edges. Instead, use silica sand and fill to within 2" of floor surface or a backer rod can be placed in compression at a depth of 2" below the surface because it is now not supporting the material.

Preparation:

Joints should be completely free of concrete debris and should be cleaned to the full depth of 2" minimum. The preferred method of cleaning is to use a dustless concrete saw with a diamond blade. The blade should hit both joint walls in one pass or should be run along both joints walls separately to ensure that walls are restored to clean concrete.

Separation:

Separation can occur cohesively or adhesively. Adhesive separation occurs when the filler breaks bond with the joint walls while cohesive separation occurs within the material itself. In both cases, we recommend that refilling these voids when they appear to compromise joint protection.

Note: All joint fillers experience adhesive/cohesive separation under significant movement, presence of water and/or inadequate preparation. The key to all applications is to minimize these occurrences through adequate technical information and techniques.

Limited Warranty Policy and Disclaimer for Products Supplied and/or Distributed by SealBoss Corp.: SealBoss Corp. Products are for Professional Use. All recommendations, statements and technical data herein are based on tests we believe to be reliable and correct, but accuracy and completeness of said tests are not guaranteed and are not to be construed as a warranty either expressed or implied. User shall rely on his or her own information and tests to determine suitability of the product for the intended use and user assumes all risk and liability resulting from his or her use of the product. Nothing contained in any supplied materials relieves the user of the obligation to read and follow the warnings and instruction for each product as set forth in the current Technical Data Sheet, product label and Safety Data Sheet prior to product use. SealBoss Corp. warrants supplied / distributed products to be free of manufacturing defects. Seller's and manufacturer's sole responsibility shall be to replace that portion of the product of the manufacturer which proves to be defective. There are no other warranties by SealBoss Corp. of any nature whatsoever expressed or implied, including any warranty of merchantability or fitness for a particular purpose in connection with this product. SealBoss Corp. shall not be liable for damages of any sort, including remote or consequential damages resulting from any claimed breach of any warranty whether expressed or implied. SealBoss Corp. shall not be responsible for use of this product in a manner to infringe on any patent or any other intellectual property rights held by others. In addition, no warranty or guarantee is being issued with respect to appearance, color, fading, chalking, staining, shrinkage, peeling, UV damage, excessive temperature exposure, normal wear and tear or improper application by the applicator. Damage caused by abuse, neglect and lack of proper maintenance, acts of nature and / or physical movement of the substrate or structural defects are also excluded from the limited warranty. SealBoss Corp. reserves the right to conduct performance tests on any material claimed to be defective prior to any repairs by owner, general contractor, or applicator. Neither seller nor manufacturer shall be liable to the buyer or any third person for any injury, loss or damage directly or indirectly resulting from use of or inability to use the product. Recommendations and statements other than those contained in a written agreement signed by an officer of the manufacturer shall not be binding upon the manufacturer or seller. SealBoss Corp. reserves the right to change the properties of products without notice.
