SealBoss® DIY CanSeal Foam Kit

The Important Difference

The SealBoss® CanSeal Foam is engineered to fully expand inside the applicator 'gun barrel'. When the foam exits the tip of the gun it is almost fully expanded - you apply exactly as much foam as you need without the messy and undesired "mushrooming" experience you may have with most of the other 'over the counter' foam products. This feature makes our foam 'predictable' and useable in areas where other products just won't perform.

With our foam and the professional applicator gun you can fill voids precisely. Contractors use our foam for many applications such as water-stop purposes in voids and cable runs, as an insulation and seal-foam in general construction and as an instant 'Backer Rod Bead' in applications where joints need a back fill prior to applying the final sealant.

Type Of Material

SealBoss® CanSeal Foam is a closed cell self curing foam for universal uses. The product is a single component MDI based polyurethane of highest quality. It expands, bonds and seals while stopping the passage of air, gases, water and dust. Besides its obvious uses to stop water infiltration it can increase energy efficiency by stopping air exchange around windows, doors, wall intrusions and at sill plates. Its lightweight, closed cell structure makes it useful for deadening sound, flotation and thermal insulation.

SealBoss® DIY Floor Joint Filler & Crack Repair Kit

Professional

Latest Polyurea / Polyurethane Technology For 10 Minute Crack Repairs. Floor Crack and Joint Repair System. For Smaller Jobs and Home Repairs.

Repair Problem Floors Fast and even at Very Low Temperatures. For Garages, Patios, Warehouses and other Structures.
